

Ideation Phase

Define the Problem Statements

Date	30 September 2026
Team ID	
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	ServiceNow service desk agent who logs and manages Incident records	create and resolve Incidents with complete, accurate data, especially high-impact ones	high-impact Incidents can be saved without an Assignment group or Assigned To, and Urgency is not always set correctly	the Incident form has no UI-level rules and relies only on user awareness and manual checks	frustrated and anxious about incorrect routing and missed SLAs
PS-2	ServiceNow administrator responsible for Incident data quality and reporting	enforce consistent data entry and stop invalid changes to Incident records	users can bypass the rules, for example by changing State directly from the list view or leaving required fields empty on save	there are no UI Policies, onChange, onSubmit or onCellEdit Client Scripts to control field behavior and validate data	worried and not confident that reports and triage decisions are based on reliable data
