

Project Design Phase
Proposed Solution Template

Date	30 September 2026
Team ID	9100IncidentGuard
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Incident records in ServiceNow can be saved with incomplete or inconsistent data. For example, High impact incidents are saved without Assigned To or Assignment group, Urgency does not match Impact, and State is changed by mistake from the list view. This causes wrong routing, missed SLAs and unreliable reports.
2.	Idea / Solution description	Configure the Incident table with a UI Policy and three client scripts. UI Policy 'High Impact Control' makes Assignment group mandatory and Urgency read-only when Impact is High (Reverse if false restores the fields). An onChange script sets Urgency to High automatically, an onSubmit script blocks saving without Assigned To, and an onCellEdit script blocks State changes made from the list view.
3.	Novelty / Uniqueness	The solution uses only built-in ServiceNow client-side features, so no server-side code or extra tools are needed. It gives instant feedback while the agent works, before the record is saved, and it covers both the Incident form and the list view.
4.	Social Impact / Customer Satisfaction	Agents get clear guidance and fewer mistakes, so incidents reach the right team faster and callers get quicker, more accurate resolution. Managers get consistent data for reports.
5.	Business Model (Revenue Model)	This is an in-house configuration on the organization's existing ServiceNow instance, so it needs no additional licence. The value comes from less rework, fewer SLA breaches and better reporting. The configuration can also be reused as a standard pattern for other ServiceNow projects.
6.	Scalability of the Solution	The rules apply to all Incident records and users on the instance. The same UI Policy and Client Script pattern can be extended to other fields or tables (for example Problem or Change) by adding new policies or scripts.
