

Project Design Phase-II

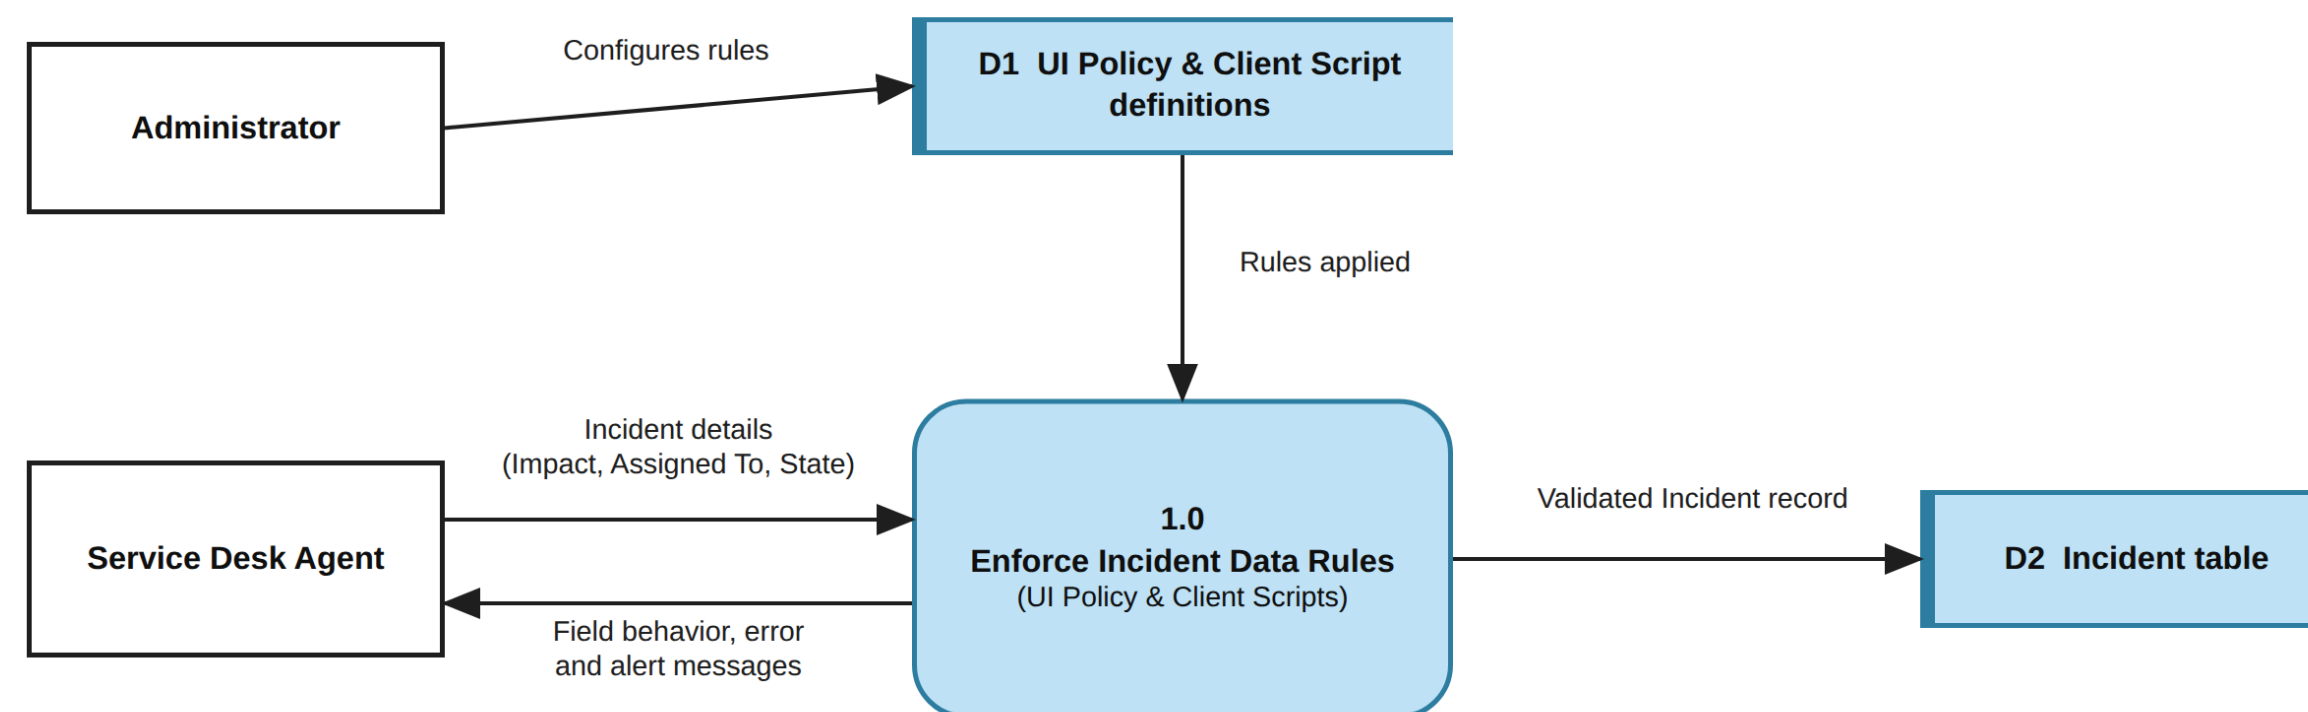

Data Flow Diagram & User Stories

Date	30 September 2025
Team ID	
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

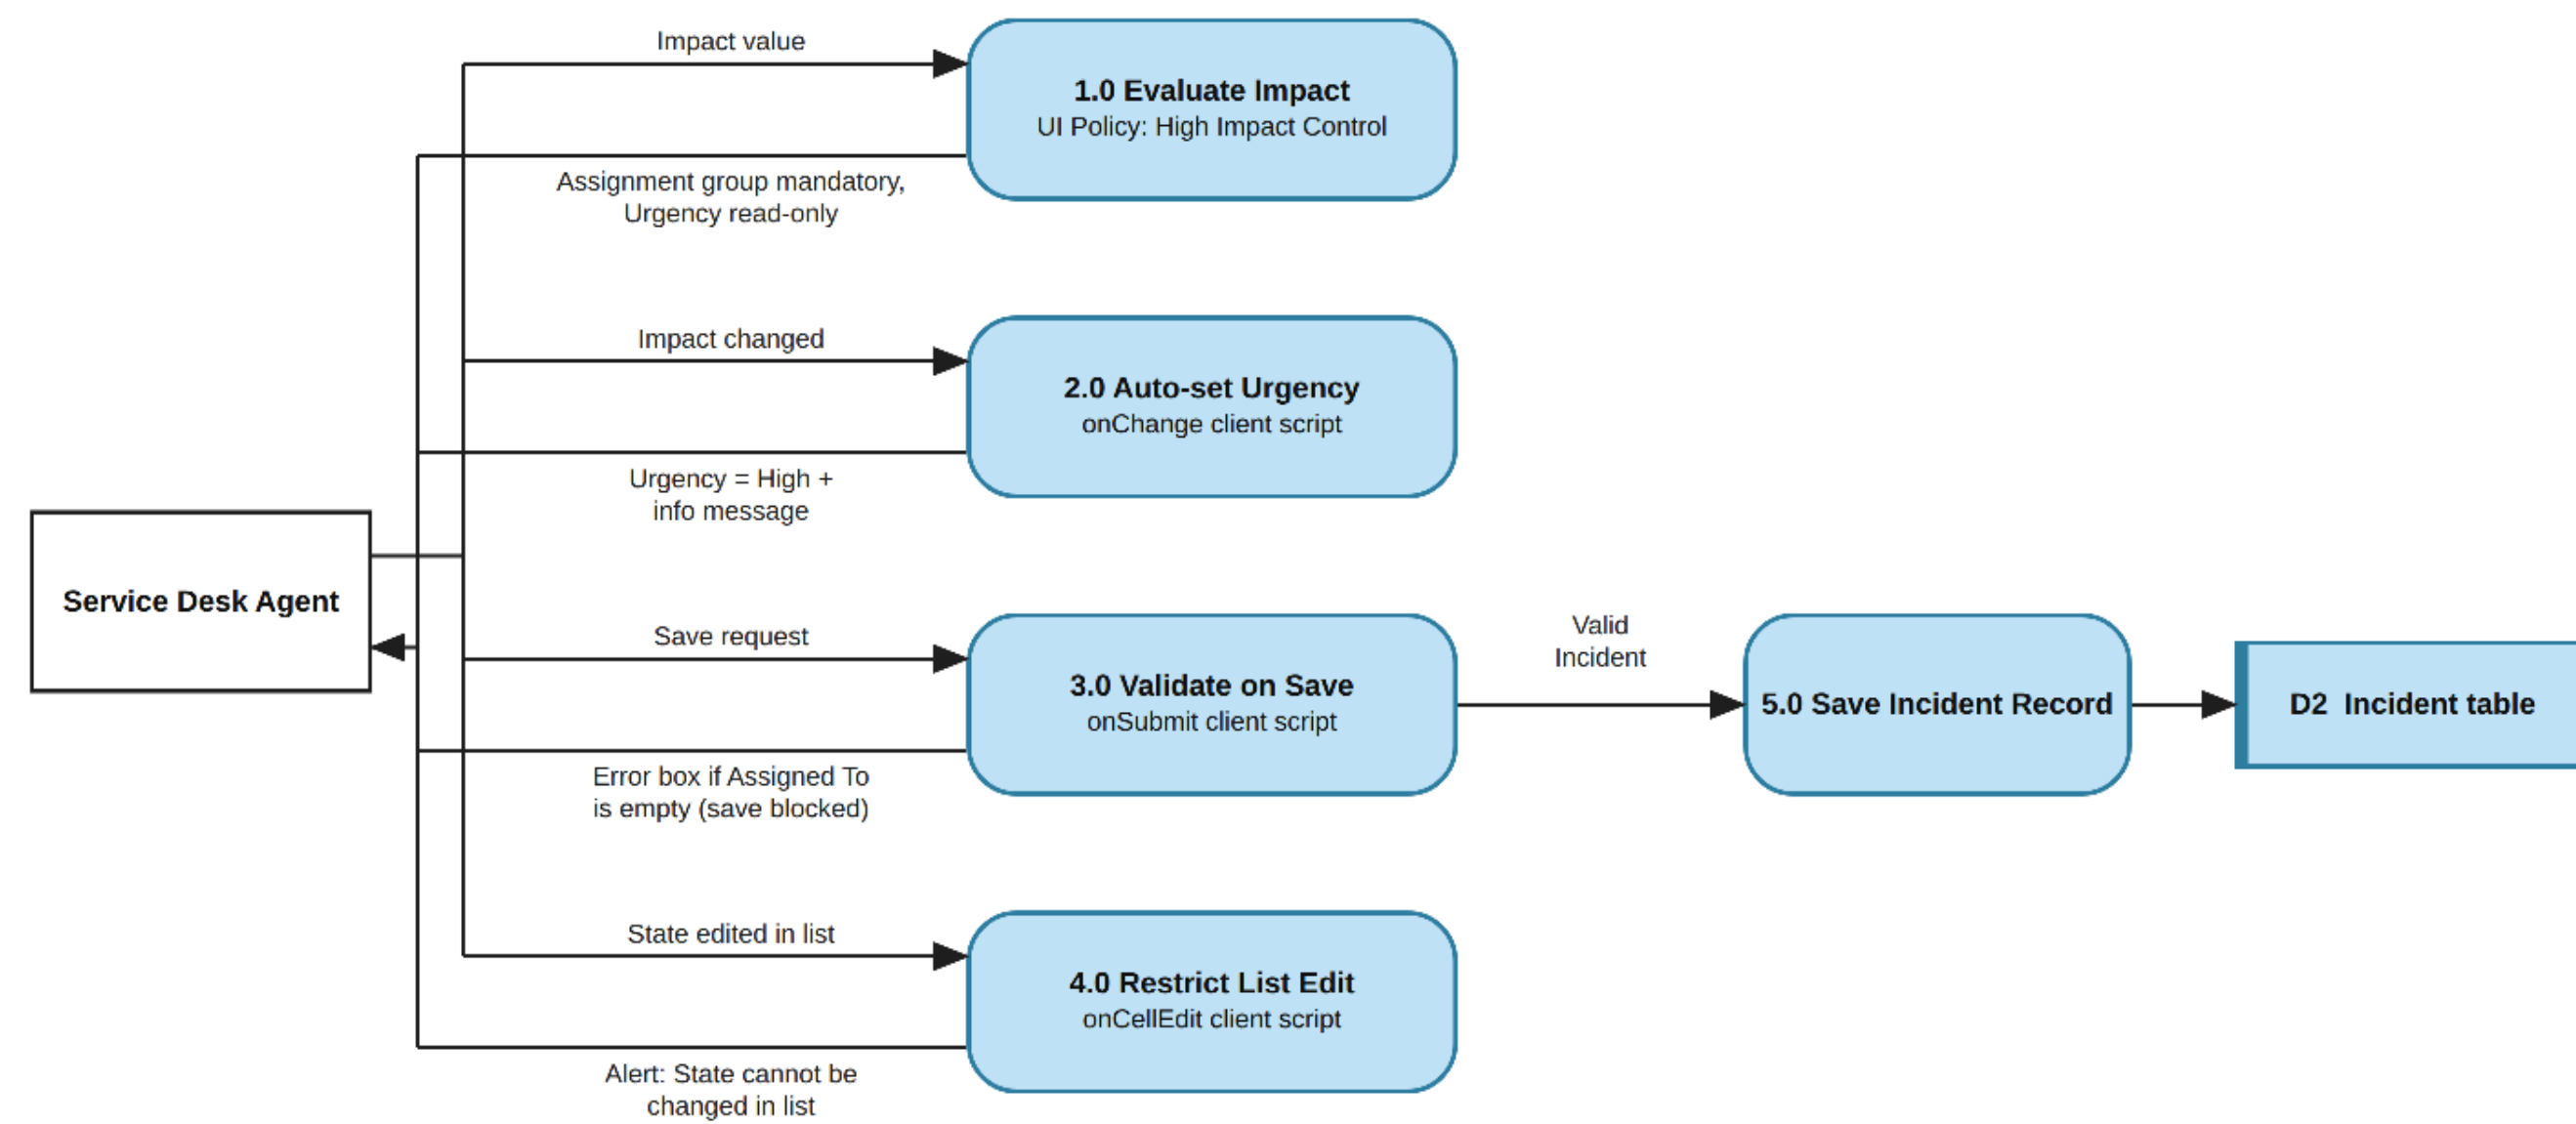

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Level 0 DFD: Implement Client Script & UI Policy (Incident)

Legend: rectangle = external entity | rounded box = process | open-ended bar = data store | arrow = data flow

Level 1 DFD: Incident Data Rules

Note: Processes 1.0, 2.0 and 4.0 run in the browser and only change field behavior or show messages. Only a valid save (3.0 passed) reaches the Incident table.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator	UI Policy	USN-1	As an administrator, I can create a UI Policy 'High Impact Control' on the Incident table that triggers when Impact is High.	The UI Policy is active and applies only when Impact is 1 - High	High	Sprint-1
Administrator	UI Policy	USN-2	As an administrator, I can make Assignment group mandatory when Impact is High so that incidents are routed correctly.	Assignment group is mandatory when Impact is High and reverts when it is	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
				not		
Administrator	UI Policy Action	USN-3	As an administrator, I can make Urgency read-only for High impact incidents.	Urgency stays visible but cannot be edited while Impact is High	Medium	Sprint-1
Administrator	Client Script (onChange)	USN-4	As an administrator, I can set Urgency to High automatically when Impact is changed to High.	Urgency updates to High and an info message is displayed	High	Sprint-2
Service Desk Agent	Client Script (onSubmit)	USN-5	As a service desk agent, I am prevented from saving a High impact incident without Assigned To.	Save is blocked and an error message appears on the Assigned To field	High	Sprint-2
Service Desk Agent	Client Script (onCellEdit)	USN-6	As a service desk agent, I am blocked from changing State directly in the list view, so I update it from the form.	An alert is shown and the State value stays unchanged	Medium	Sprint-2
Service Desk Agent	Reverse Condition	USN-7	As a service desk agent, when I change Impact from High to Medium, the extra restrictions are removed.	Assigned To is no longer mandatory, Urgency is editable and the record saves	Medium	Sprint-3
Team Member (Tester)	Testing	USN-8	As a team member, I can test the complete configuration end to end.	Mandatory enforcement, successful save, reverse condition, list edit blocking and form-based update all pass	Medium	Sprint-3
